LORCH TRAC RL PERFORMANCE

LORCH TRAC RL Performance

Boasting integrated seam tracking, the Lorch TRAC RL Performance is a high-end welding tractor that produces welds that live up to the highest standards. The track-guided TRAC ensures steady speed and thus, reproducible welding results even under the toughest operating conditions.

The machine evens out any product tolerances automatically thanks to its built-in “seam tracking” function – both during MIG-MAG and TIG applications. This feature allows the welder to weld even warped workpieces without a hitch. Another feature that lessens the welder’s load is the removable control panel. Finally, the integrated orbital function makes it a breeze to weld pipes – even in fixed positions.

Typical areas of application include welding operations on pipelines and stainless steel enclosures as well as on support structures with a high workpiece tolerance.

Fig. Without power supply unit

Features and benefits

- Even out product tolerances vertically and horizontally thanks to tactile seam tracking.
- Reproducible TIG welding results even on warped sheet metal thanks to integrated arc length control (AVC).
- Memory function for all relevant process parameters including job selection in the power source for reproducible seams that meet the highest standards.
- Automated sequence for welding segments.
- Improved ergonomics for the user thanks to the removable control panel with intuitive operation.
- Efficient welding of pipes in fixed positions thanks to the integrated orbital feature.
- Enhanced productivity during recurring welding tasks thanks to a controlled cut-off and automated return of the TRAC at the end of the weld seam.
- Convenient adjustment of the welding parameters during operation by means of the TRAC control panel.
- Welding of large seam volumes or compensation of positioning errors thanks to the integrated oscillator unit.
- Documentation of the welding speed using Lorch Q-Data to ensure 100% data recording of the welding parameters according to WPS.

Product specifications

TRAC RL Performance		
Article number		453.0040.9
Voltage		1~230 V, 50-60 Hz, 1~115 V, 50-60 Hz, 1~42 V, 50-60 Hz
Power		120 W
Welding position horizontal		PA, PB, PC, PD, PE
Welding position vertical		PF, PG
Diameter ring track	(mm)	200-3000
Diameter custom-made ring track	(mm)	3000-10000
Curvature radius flexible rail	(mm)	from 5000
Welding process		MIG-MAG, TIG, TIG cold wire
Torch diameter	(mm)	16-22 (optionally, up to 35 mm)
Pulling force horizontal	(N)	400
Pulling force vertical	(N)	300
Speed horizontal	(cm/min)	0-300
Speed vertical	(cm/min)	0-110
Type of oscillation		Linear
Path of oscillation		Trapezoid, triangle, straight line, square
Width of oscillation	(cm)	0.2-11.8
Speed of oscillation	(cm/min)	10-30
Oscillation delay central and external	(s)	0-5
Weight, net	(kg)	10
Dimensions (L/W/H)	(mm)	470 x 318 x 354
Number of segments for orbital welding		2-8
Program memory		10 programs

Application spectrum

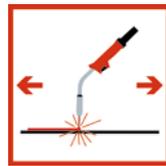

Continuous welding

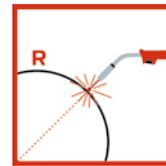

Segmented welding

Arc length control TIG

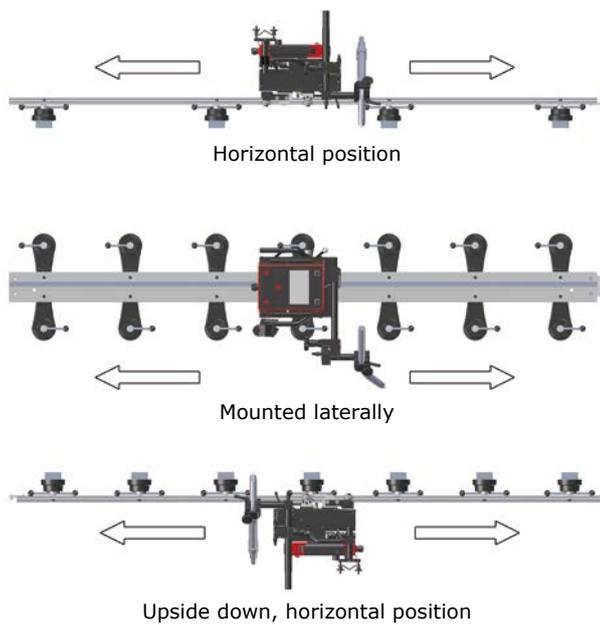

Circular welding with ring track

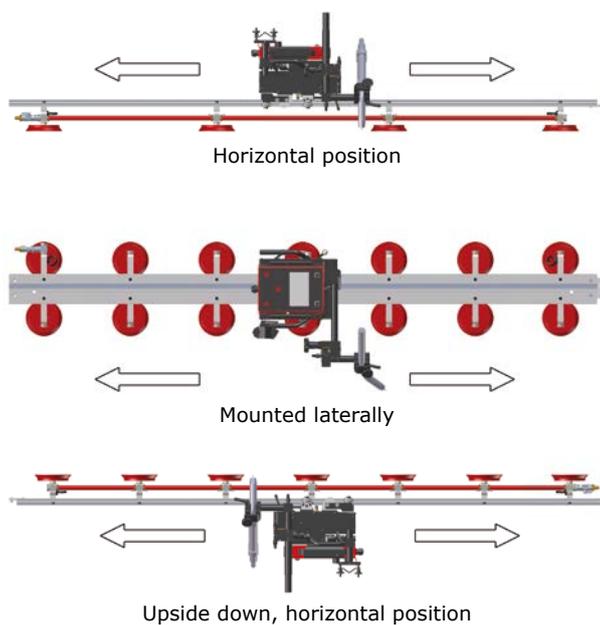

Orbital welding

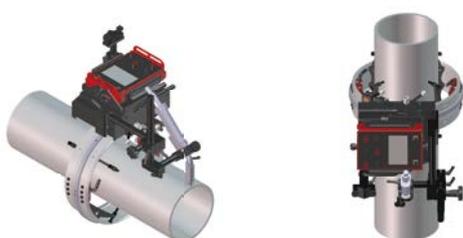

TRAC RL Performance on guide rail with magnetic holder

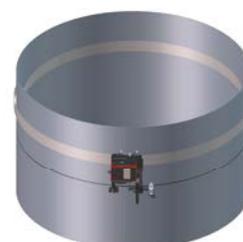

TRAC RL Performance on guide rail with vacuum unit

TRAC RL Performance on Ring Track

TRAC RL Performance on prefab ring tracks (pipes/tanks 200 mm to 10 m)

TRAC RL Performance on Flex rail (tanks with 10 m or more)

Highlights

Tactile seam tracking

The tactile seam tracking unit is fitted with a feeler head which is positioned on the workpiece in front of the welding torch. This sensor detects any change of the welding position and automatically triggers a correction of the torch position. This feature provides for compensation of workpiece tolerances or warpage both in the horizontal and the vertical direction.

Integrated arc length control

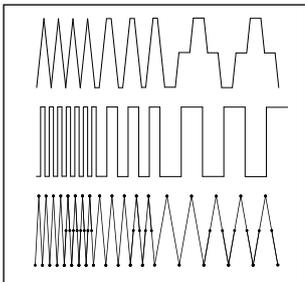

The power source transmits the arc length to the TRAC as a measured value. This value sets the motorised height adjustment higher or lower as needed, ensuring that the distance between workpiece and electrode remains reproducible. The arc length control feature only works with machines of the Lorch V-series.

Orbital welding feature

The integrated gravity force sensor makes it possible to detect the position of the TRAC on a pipe in forced positions. The control lets the welder define up to 8 segments per pipe side, allowing them to set up the welding parameter and speed that are ideal for the respective TRAC position.

The switch between the different segments is made automatically during the welding process. This feature delivers a reproducible weld seam result during welding of pipes in forced positions. The TRAC moves along over the pipe on an ring track.

Oscillator unit

The built-in linear oscillator unit offers the twofold benefit of welding seams with a larger volume and compensating positioning deviations.

The welder can choose between a trapezoidal, square or triangular oscillation mode – depending on the application they need to complete.

Segment welding

The machine offers the option to produce continuous weld seams by defining the weld seam and the distance between welds in the control. It, furthermore, allows the welder to program the total length of the weld seam, ensuring that the unit will cut off upon reaching the end of the seam.

100% data recording according to WPS

Conventional welding data documentation recording such process parameters as amperage, voltage and wire feed speed is complemented by the welding speed of the TRAC system. This puts the welder in a position where they can document all relevant variables in the Lorch Q-Data system in accordance with the WPS. This feature allows for an exact calculation of the heat input per unit length.

Rail system: Lorch Flex Track

The Lorch Flex Track is a flexible rail system that allows for applications involving curved surfaces with a radius of 5 m or greater. The rails can be extended as needed.

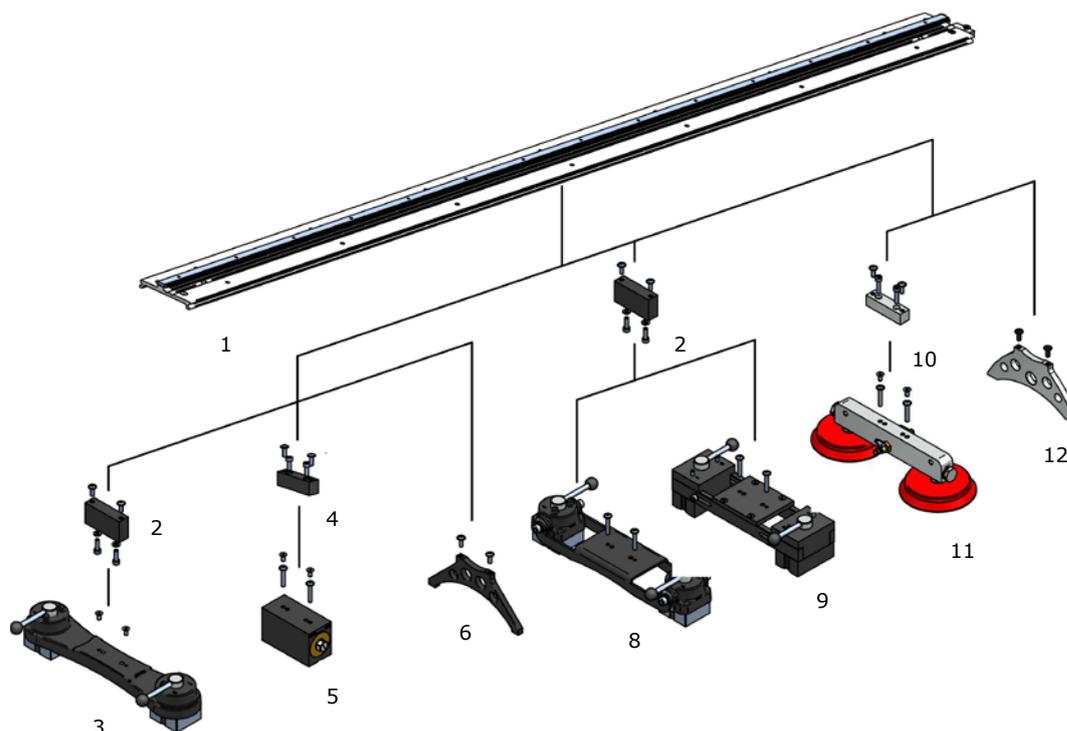

Figure	Additionally required	Article number	Description
1		463.8180.0	TRAC RL Flex guide rail 2 m
2		463.8181.0	TRAC adapter for Flex guide rail
3	2	463.8121.0	TRAC double magnetic holder
4		463.8334.0	TRAC adapter Flex rail II
5	4	463.8328.0	TRAC magnetic holder, compact
6		463.8182.0	TRAC support for Flex guide rail
8	2	463.8329.0	TRAC magnetic holder, swivelling
9	2	463.8330.0	TRAC magnetic holder with adjustable distance
10		463.8300.0	TRAC adapter for Flex guide vacuum
11	10	463.8307.0	TRAC vacuum bracket assembly
12		463.8337.0	TRAC Support Flex rail (aluminium)

To connect several rails, we recommend using the "TRAC gear rack adjusting tool".

Rail system: Lorch Rigid Track II

The Lorch Rigid Track II is a rigid rail system that offers superior flexural strength. This system allows for applications that go beyond the material of the workpiece. This new rigid rail system is exceedingly easy to transport.

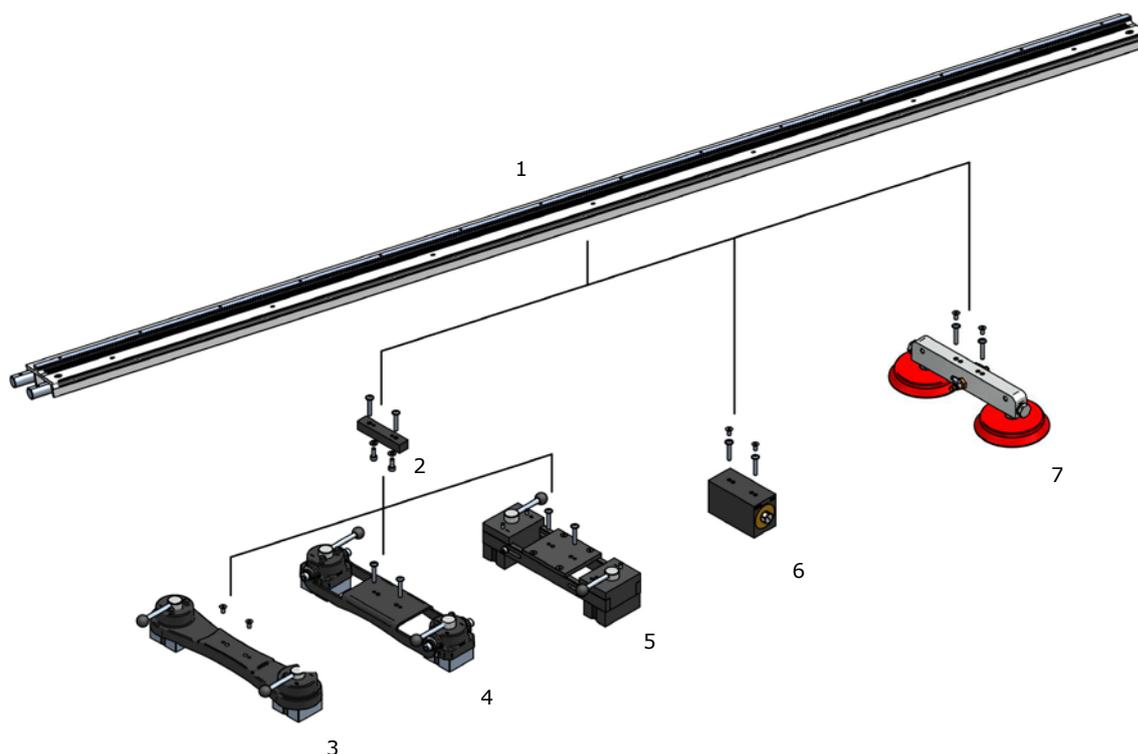

Figure	Additionally required	Article number	Description
1		463.8331.0	TRAC guide rail, rigid
2		463.8332.0	TRAC adapter guide rail, rigid
3	2	463.8121.0	TRAC double magnetic holder
4	2	463.8329.0	TRAC magnetic holder, swivelling
5	2	463.8330.0	TRAC magnetic holder with adjustable distance
6		463.8328.0	TRAC magnetic holder, compact
7		463.8307.0	TRAC vacuum bracket assembly

To connect several rails, we recommend using the "TRAC gear rack adjusting tool".

Rail system: Lorch Ring Track

The Lorch Ring Track is a prefabricated ring track designed for pipes or tanks that possess a fixed diameter. Standard models of the ring track are available for workpiece diameters ranging from 200 to 3000 mm. Ring tracks with a workpiece diameter of 3000 mm or more are available on request.

	Article number	Description	Comment
	463.8359.0	TRAC Support Ring Trac with screws	Recommended for typical applications involving black steel
	463.8360.0	TRAC Support Ring Trac with plastic feet	Recommended for workpieces made of stainless steel
	463.8361.0	TRAC Support Ring Trac with magnets	Recommended for workpieces with a larger diameter, as the ring track can be affixed quickly and with perfect ease

Refer to the price list for information on the number of required supports per ring trac. Proper transport during shipping requires a wooden crate, which is also specified in the price list.

Included in scope of supply
